AK sound

2024 CATALOGUE

TOP SPEAKERS

- **Our top speakers are best paired with bass speakers for the best sound experience. The box of our top speakers is made of aluminum with a powder coating, so they can withstand long-term weather conditions. Thanks to their compact dimensions with power from 250 - 750 W, you can store them anywhere on the attraction.**
- **The price includes a stainless steel grid, holder and all screws are stainless steel, so they perfectly resist corrosion. The speakers are perfectly designed for attractions, since their drivers have a radiation angle of 100 degrees, so they cover a large part of the attraction with sound, on the contrary, they are not very loud far from the attraction.**
- **The color of the cabinet can be chosen from the RAL palette, so everyone can find a suitable combination for their carousel.**
- **It is also possible to make a custom sized speaker for your attraction, for example in a rack with lights or for another part of the attraction that requires specific dimensions. The price is then negotiated directly with the final model of the special speaker box.**

FULL RANGE SPEAKERS

- Our FULL RANGE speakers can be used alone without a bass speaker, but also with it.
- They are composed of two 8, 10 or 12 inch speakers, one of which is coaxial (with a built-in driver) and one with a mid-bass. Both speakers play mid-bass while the built-in driver takes care of high tones up to 18kHz.
- The power of full range speakers is from 500-800W and they play from 55, 50, 40Hz.
- The boxes of our FULL RANGE speakers are also made of aluminum and are powder coated.
- The price includes a stainless steel grid, holder and all screws are stainless steel, so they perfectly resist corrosion.
- The color of the cabinet can be chosen from the RAL palette, so everyone can find a suitable combination for their carousel.
- The radiation angle of the drivers is: 100 , 70 , 80 degrees
